Zoom's 2.0 Vision: CEO Eric Yuan and CFO Michelle Chang on Building a ‘System of Action’

Zoom founder and CEO Eric Yuan and CFO Michelle Chang explain the company’s pivot to “Zoom 2.0.” From the deployment of AI digital twins in the C-suite to the future of the five-day workweek, Zoom’s leadership explains how they are balancing massive AI investments with shareholder returns. Recorded on March 24, 2026.

00:00 / 32:03 1x

FULL TRANSCRIPT

This transcript was prepared by a transcription service. This version may not be in its final form and may be updated.

Eric Yuan: I really do not think we need to work for five days because literally we all will employ so many digital agents. And I think we all have more time for human-to-human interaction like this.

Michelle Chang: This isn't a disagreement, but I think to build on that, I think about it less as the quantity and more of what it will feel like.

Alan Murray: The WSJ Leadership Institute Presents: Leaders. I'm Alan Murray. During the pandemic, Zoom became a household name. It was the defining technology that kept the world connected when everyone else shut down. But founder and CEO, Eric Yuan is done talking about the past. He has a strong vision about how Zoom can transform the AI future. And he and his CFO, Michelle Chang, spoke with me about it at our CFO summit in Palo Alto earlier this year. I won't give it all away, but it hinges on turning the conversations that happen on a Zoom call into actions powered by digital agents. You're going to want to hear this because it could be a window into the future of work. And by the way, here's something else Eric said. "He believes that future will lead to a three-day work week." I'm not sure I agree with him on that, but he makes a strong case. We're going to dive right in after the break. I have to start with something I only learned recently, which is that you had your digital twin, your AI digital twin do an earnings call instead of you.

Eric Yuan: That's right.

Alan Murray: Anybody else seen that before? Any of you do have digital twins?

Michelle Chang: Prepared remarks only. I feel compelled to-

Eric Yuan: I wish my digital twin can join today's session. I can stay at home.

Alan Murray: Well, we're very happy to have you here in person. But why did you do that?

Eric Yuan: Actually, literally it did save me a lot of time. Remember, since we became a public company in 2019, every time during the quarter earning call, guess what? I needed to either record a script or read a script. I hated that. I do not like it. And later on, we levered our AI technology. For now, I can tell you I truly enjoy our quarter earning call. I just joined our earning call for-

Alan Murray: Because you just listened.

Eric Yuan: No, for live Q&A. And Michelle, she's going to talk, drive the whole session. I joined for live Q&A.

Alan Murray: So it didn't answer any questions though.

Eric Yuan: Right.

Alan Murray: It could have answered questions.

Eric Yuan: Yeah. Live Q&A for questions, but a script part, I can leverage Zoom video clips to play around my video clip.

Alan Murray: Michelle, did he ask you about whether this was a good idea before he decided?

Michelle Chang: He did. He told me, and I have to say I was a little skeptical, but I actually think it's-

Alan Murray: As always.

Michelle Chang: I know. We have that dynamic. But yeah, it was a good choice actually. It was a fun way to get the message of our product out. And look, it strikes that right balance that I think we've been talking about, about the in-person, the Q&A that really matters is still human-to-human dialogue and the others.

Alan Murray: Does he ever send his digital twin in to meet with you for a meeting?

Michelle Chang: If he has, then I haven't figured it out yet. No.

Eric Yuan: She does not accept my invitation. So if I send my digital twin.

Michelle Chang: No.

Alan Murray: So you know you're speaking to an audience of CFOs here. Tell me what you were looking for when you hired Michelle.

Michelle Chang: Oh, my gosh, I should write this down.

Eric Yuan: So it's great experience working together with Michelle. So I look at her for the Zoom 2.0 journey, right? How to grow our business from $5 billion company to be a $10 billion company, right? And being a founder and a CEO, quite often I look at top line growth, bottom line cost control, customer interaction, product employees. A lot of work. I really want to have a business partner. Essentially more like a co-CEO with a deep financial background.

Alan Murray: So you think of her as almost a co-CEO?

Eric Yuan: Yeah.

Alan Murray: Is she your number two?

Eric Yuan: Yeah, absolutely.

Alan Murray: I don't want to embarrass you here, Michelle.

Eric Yuan: Yeah. It's very deep, the financial background. Essentially, look at what Michelle does every day, I think very similar to what I'm doing, right? Top line, bottom line, product, business strategy and employee customer, very similar.

Alan Murray: Does she ever say no to you?

Eric Yuan: Oh, my God, this is quite often. So I can tell you, whenever we hired a new executive to join our e-staff meeting for the first few weeks, always wonder what's happening for your e-staff meeting because we debate heavily during our e-staff meeting because we trust each other. We want to be ourselves. Quite often I do not like (inaudible) obviously yes, obviously no. It's kind of a challenge each other with her great background, working for Microsoft for so many years, deep financial background. It's very healthy dialogue.

Alan Murray: Yeah. So let's talk about that, Michelle. I mean, as Eric said, you were working for Microsoft, not a bad company. What attracted you

about this job?

Michelle Chang: Yeah, I think-

Alan Murray: Zoom experience better.

Michelle Chang: Yeah. On that one really quick, fun little side story. When I'm in airports, I don't think once in 24 years somebody ever stopped me to say how much they love a company. And without fail, probably at a 30% hit, people stop and say how much they love Zoom. And I think it's a testament.

Alan Murray: Really? Emotional connection.

Michelle Chang: And they have no idea who I am. So this is not like anything where the title, but I think it's because of the love that Eric has kept the customer at the center of a lot of things. So I give Eric a lot of credit for that. So I picked up the call because I knew that it was a great company that came to the world's needs. But honestly, what kept me sort of talking to Eric was a lot of what he described in Zoom 2.0 and a sense that I could have a lot to learn, which is really important to me and that I could help in some way.

Eric Yuan: I guess your kids also use the Zoom, right? That also helped.

Michelle Chang: They did in the pandemic, but we were also a heavy Microsoft shop at that point. I was the team CFO during the pandemic.

Alan Murray: How could you use Zoom? You couldn't use Zoom. You weren't allowed to use Zoom, were you, at Microsoft?

Michelle Chang: No.

Alan Murray: All right. But let's talk about that Zoom 2.0 because we all know Zoom-

Michelle Chang: Yeah.

Eric Yuan: Thank you.

Alan Murray: … Zoom 1.0. I mean, it was an incredible experience. And I want to come back to the experience of the pandemic because I'm curious how that affects a company to be on a rollercoaster ride like that. But leave that aside for a minute. Tell us where we are going in Zoom 2.0. What is your vision?

Eric Yuan: So maybe I should take a step back to look at what we're doing every day no matter how many hours you work on anything. Essentially it really comes down to two interactions, human-to-human interaction like this or Zoom call or the human-to-system interaction.

Alan Murray: Human-to-systems?

Eric Yuan: Yes.

Alan Murray: Like your CRM or…

Eric Yuan: Yeah, exactly like your CRM, email chat, any computer system, human-to-system. I think for now most of the time to complete a task, it will need a two-step process. Human-to-human interaction and then human-to-system interaction. I think in the AI era, the human-to-system interaction, by and large, will be replaced by agentic interaction, meaning agent can help you to log into your backend system, get a thing done. But human-to-human interaction will remain the same.

Alan Murray: And so what that means, if I understand you correctly, so we'll be on a Zoom call and we will agree on something and the Zoom call will then take that action for us, whether it's to go out and buy something or log it into the CRM or send an email to someone, it will happen automatically without the second step.

Eric Yuan: Exactly right. That's why I see our vision is to transform our business being a communication company to a system of action company, essentially model from conversation to completion, meaning after the Zoom call is over, we generate transcription summary of insights, a leverage workflow or agent to automatically update it back in the system.

Alan Murray: And how far are you from that vision?

Eric Yuan: We already have those features built in.

Alan Murray: Really?

Eric Yuan: We just announced literally last, I think recently at Enterprise Connect.

Michelle Chang: Yeah. (inaudible)

Alan Murray: And Michelle, we've had a lot of conversation over the last couple of days about how we've talked with Jeff Hoffmeister from Shopify, for instance, about how this AI transformation often leaves the CFO sitting at the center of critical decisions because people who want money for investment on some new project have to come to you and you have to decide, is this something AI should do or is this something people should do. How do you deal with that?

Michelle Chang: Well, I think what Eric said about kind of our relationship, I think it's in part kind of the role, but it's also like there's not that many people at a company that can see left to right across everything. Oftentimes you know kind of your discipline. And so having people that can see a company from one end to the other allows you to kind of be able to look and say, "Okay, how do you both get tops-down kind of pressure to get on AI? How do you start virality? How do you think about the return that Eric and I are going to have to talk to investors about?" And so a lot of it I think is we tend to go to forums like this and then we come back and we compare notes about where everybody else is and how we're tracking. And look, Eric takes lead obviously on the R&D side and how we implement AI there. And I take lead in kind of the areas where the financials are more front and center today.

Alan Murray: So one thing that has been a big topic with this group for the past year has been the question you just raised.

Michelle Chang: The ROI.

Alan Murray: The ROI. How important is that-

Michelle Chang: Of course.

Alan Murray: How important is that to you or do you think like, well, we can wait a few years to get to that?

Michelle Chang: No, no.

Alan Murray: No.

Michelle Chang: And I mean, I would say for us, we sort of have two sides, like what's the return of AI from a top line perspective because we're obviously selling and that means you cannot lose sight of business value from a customer. All of us are going to stare down proposals at some point and want to know what the value is. So there's that. But in terms of the cost-cutting, and I think it's a lot of like, okay, where does an AI naturally play? Where do we have large costs? Where's the industry sort of seeing early fruit? And we then go and for us, the formula looks something like customer support. That's also a product that Zoom sells. So we get to be customer zero in that journey. Sales, another big cost center. What does AI in sales look like? What does it look like in terms of product development? And then there's sort of the general employee productivity piece.

Eric Yuan: Good news. Whenever I request more budget to spin on AI, Michelle supportive because not only do we look at the short-term return, but also look at long-term ROI, that's even more important.

Alan Murray: And how has this transition to AI affected your headcount?

Michelle Chang: We're flattish in headcount. I think we're also going through this reinvention that we talked about. So I think in the fullness of the time we'll be slightly down, but look within that, there's a lot of shift, right? A lot of shift to higher value work, a lot of shift to different roles and functions. And so I think it's sort of misleading to just leave it at a flattish-

Alan Murray: I want to just put all of you on notice. I want to leave a lot of time in this segment for you to ask questions. I think Eric said he wanted to answer questions from the CFOs.

Eric Yuan: So many great CFOs here. Why not?

Alan Murray: Right. Maybe customers.

Eric Yuan: Yes.

Alan Murray: But let's go back to this vision for the future because you want Zoom to be the agent that gets work done within the enterprise. You're not the only company that wants that.

Eric Yuan: Yes, that's right.

Alan Murray: Yeah. Why will Zoom win this battle?

Eric Yuan: Because again, as I said, to get anything done today, literally you need two-step processes or two interactions, human-to-human interaction, human-to-system interaction. We are uniquely positioned as a vendor for human-to-human interaction. The human-to-human interaction essentially become the user interface to get a thing done. The human-to-system interaction, that interface will be replaced by agent.

Alan Murray: So you're capturing the data at the front end the way, I mean-

Eric Yuan: Yes.

Alan Murray: … Microsoft Teams might have a somewhat similar-

Eric Yuan: No, which experience better than customer probably can leverage that more. As long as we keep innovating, customer embrace the Zoom model more and after the conversation is over, agent can interact with the system.

Alan Murray: And how do you think about human in the loop in this process? I mean, the agent who's on that call can go do things very quickly if you want them to, but what kind of controls are you putting in the system?

Eric Yuan: I think first of all, you got to make sure human-to-human interaction are seamless. That's very important. The second thing is before

you delegate it to agent to update your backend system, as a human being, you need to validate the data. I call it the context window. If you human-to-human interaction jumps to the human-to-system interaction, in the middle you have a context window. You need to make sure that someone in the middle of that to validate this data.

Alan Murray: So it will say, "Do you want me to send that email? Do you want me to put this in the CRM?"

Eric Yuan: Yes.

Alan Murray: "Did I order that box of things?"

Eric Yuan: Yeah, you can look at all the data, make sure this is right data and then one click to submit.

Alan Murray: And you say most of these tools exist in Zoom now?

Eric Yuan: Absolutely. Literally I'm using that every day.

Alan Murray: And are your customers using it?

Eric Yuan: Yes, some big customer and also we announced the Enterprise Connect and we have a new release April 20th, another release May 11 and further promote those services.

Michelle Chang: And our finance team is using it.

Alan Murray: Your finance team is currently using it. And how has it changed the way the finance team operates?

Michelle Chang: I mean, I fundamentally as a CFO, let me start there. I prepare for earnings significantly differently than I used to in terms of it helps me tighten answers, it helps me curate, it helps me predict.

Alan Murray: Will it create PowerPoint slides for you?

Michelle Chang: Sure, sure, sure. We use Gemini as well. So we use a lot of different AI tools, but on the Zoom ones, like for our SOX control, we use it

to scan over transactions, look for risk, highlight things that we wouldn't have otherwise seen, begin to write, audit and report. So we use it a lot in risk control. We also use it a lot with our customers. Our customers used to have really in-depth tax questions for us that actually were clogging up a lot of our customer interactions and some (inaudible) And so we built together with what Eric's talking about, we built sort of an agent to help answer those and get customers what they need faster.

Alan Murray: So it gets back to that customer zero thing you were talking about earlier. You guys start with it yourselves.

Michelle Chang: Yeah.

Alan Murray: Questions for Eric? Yes, please.

Speaker 4: Eric and Michelle, thanks so much for being here. I have a bit of a two-part question. The first question is around capital allocation. How do you balance the discipline of innovating and investing and innovating while at the same time making sure that the core business is producing the cash needed to fund the new innovation? So that's kind of the first question. The second question gets into competitive moat. As you think about the agentic dimension of your new strategy, Zoom 2.0, how do you think about building agentic in-house versus partnering with some of the big players that seem to have a lot of experience across multiple industries? So how does that play into your equation about competitive mode, building in-house versus outsourcing?

Eric Yuan: Yeah. How about I address the second one, you address the first one?

Michelle Chang: Okay. On the capital allocation, look, we go through a long-range planning cycle where we talk quite a bit as a leadership team about how do we get to the long-term goals that we want. And then every quarter or every year we kind of go through an exercise where it's like, what are the priorities of Zoom? And I think that's like the most fundamental question to answer with capital allocation. If you know that this is what it's going to take to get you where you want to go, what then are the priorities for the

next call it year or two years? And really those priorities, we debate the name quite a bit. We had quite a vigorous debate amongst our leadership teams of which ones rose to the surface and all of that, but there's something so healthy in that. And then basically that serves as our frame for how we talk to investors about what we're prioritizing and then every dollar and headcount and that gets sort of moved into that frame so that we can zoom out, no pun intended, and be able to look at is our money where our mouth is in terms of what we say are our priorities, our dollars going there.

Eric Yuan: Yeah. So back to your second part of the question. So look at Zoom 1.0 journey, by and large, we're more like a conversation company after meetings over, it's over. You do not have any data generated out of the meeting. In 2.0 journey, we already generated a transcription summary for a while, recently we launched a cross-platform my notes. So essentially almost every meeting is over, you have some data. Those data are very important for the AI, for the agentic framework or workflow. And also our agentic framework is open, meaning we embrace other system like Anthropic. At the same time also offer agenetic framework to customer as well.

Alan Murray: So you can, just to make sure I understand, so you can integrate Zoom with any agent?

Eric Yuan: Absolutely. Yeah. Like the Anthropic we integrate very well. Any other open system we do integrate very well. And also give customer choice, right? After you generate transcription or summary, you can leverage our agent or workflow, get thing done.

Alan Murray: And so then what is the moat?

Eric Yuan: I think data and also the experience.

Alan Murray: You provide the best human-to-human experience and that will be your moat for... And the data that gives you-

Eric Yuan: Yeah. Data to help the agent to drive the get work done. Yeah.

Alan Murray: Does that convince you?

Speaker 4: Well, the question is going to be the level of competition because you can really see today different platforms that can get into that space as well. Oh, sorry.

Alan Murray: Yeah. I think that's what's so interesting about this moment. You do have so many big well capitalized players playing for the same space and everybody brings a somewhat different advantage to that space.

Eric Yuan: No, yes and no. Look at all those very big successful RM companies. I do not think they focus on human-to-human direction. And also not to mention the context window as well. Human interaction, that's our strengths, and then we move towards the completion part, we also have a context window and also open system. Let's say take a federal approach, for example. I do not think in the future, every company, they are going to standardize one system. Very likely to standardize multiple systems. We look at our AI, the philosophy. We are taking a federated AI approach. In terms of aging the framework, we are doing something similar. Also support embrace the federated agentic framework.

Speaker 4: I'd like to volunteer to be a beta on 2.0.

Eric Yuan: Thank you.

Michelle Chang: Contact me afterwards. Be happy to get you set up.

Eric Yuan: That's why I'm here. Thank you.

Alan Murray: Other questions or comments?

Michelle Chang: And maybe just while we wait for the next question, in case maybe the group isn't as familiar with the term federated. What it means is basically we will take Zoom's AI models that we built ourselves, as well as those of OpenAI or Anthropic or other players, and basically we'll curate to get the best answer at the lowest cost. So it's helpful.

Alan Murray: Who else wants… I have lots of them, so-

Michelle Chang: Yeah.

Alan Murray: … yes, right here.

Yolis Reese: Hi, we've been talking a lot about capital-

Alan Murray: I'm sorry. And can you introduce yourself to-

Yolis Reese: Sure. I'm Yolis Reese. I'm not currently a CFO of anything, I'm between jobs. But there's been a lot of conversations about capital allocation yesterday and today into AI. And I'm just curious, how do you make those allocations? There's a lot of areas you can invest the product itself and the additional development, but then internally to sales, marketing, finance, all kinds of tools. So how are you making those decisions? Do you have a framework, a forum? How do you go about that?

Michelle Chang: Do you want me to lead out?

Eric Yuan: Yeah, go please.

Michelle Chang: Yeah. I mean, I think we have an overall framework. First, I'll set aside the top line and we also monetize AI. So setting that aside, I think the question's a little bit more on the cost side. It first starts with being able to track tokens and to see them to really understand. And look, the ultimate framework that we use is some degree of either holding flat or reducing costs. I would say that we try not to overly constrain it. In a tech business, it's also very important that you encourage ideation and all of that. And then maybe the other thing that I think Zoom did that was smart is we started like an AI champions group. So let's pick a passionate person in each discipline. Let's make sure that they're extra connected with the center, that they know how to use the tools, that they know what's available to them, and then they can act as sort of a disseminator within the team. So I think it's uber financial frameworks, insights into where it's actually being used, because a lot of this is going to be iteration and learning, and then creating that virality. I love what Gina said earlier about it's a tops-down and it's a bottoms up.

Alan Murray: Yeah, you got to have them both.

Eric Yuan: So one example is that, as Michelle mentioned, our total headcount is flat. However, you look at our R&D headcount, in particular for AI engineers, was still growing very well. Even this fiscal year, we also hire a lot.

Alan Murray: A lot. And when you think about AI, Eric, are you thinking cost control or are you thinking revenue expansion?

Eric Yuan: For sure revenue expansion.

Alan Murray: You let her worry about the cost control?

Michelle Chang: Oh, I worry plenty about the revenue too.

Eric Yuan: She's worrying both side.

Alan Murray: That other company that you worked for, how is the culture different than working for Zoom?

Michelle Chang: Than Zoom? Yeah. I mean, I already talked probably the first and foremost is what I said about customer.

Alan Murray: Really focused on the customer.

Eric Yuan: Before we can make the customer happy.

Michelle Chang: It's very different vibe of just like every conversation just gets back to customers at that point. And I don't want to say that my predecessor didn't love customers too, but that's probably the most fundamental. And then frankly, I think there isn't as much bureaucracy and you can kind of get to putting things into action and really trying and iterating. And there's a scrappiness and a pace that I think exists at Zoom that didn't exist.

Alan Murray: Don't all companies become bureaucratized over time?

Michelle Chang: Yeah, maybe that's a bit at the size of it happening.

Eric Yuan: Yeah error. Yes, that's right.

Michelle Chang: Yeah.

Alan Murray: How do you fight that as the founder, CEO?

Eric Yuan: I think speed is everything. On develop, every day we talk about speed. Michelle probably can share more actually every day, almost every meetings, I'm pushing team very hard because I push myself very hard as well. Fast, faster speed, speed, velocity every day. Whenever someone tells me the schedule really scale next week, I think, "Why not this Friday?" Almost every time to all Q2, I think, "Why not the first month is Q2?" Every time, no exceptions.

Alan Murray: I want to go back to the pandemic experience because it was such a unique experience. You weren't at the company at that time, but the stock price was floating around, I don't know, 70, 80, $80 a share. And then we hit March of 2020 and you zoom literally to over $500.

Eric Yuan: That's the worst time so.

Alan Murray: The worst time?

Eric Yuan: Yes.

Alan Murray: Why? What was your net worth on paper? How can that be worst?

Eric Yuan: Remember, that's on paper, okay? No, the problem is-

Speaker 6: (inaudible) is coming after you.

Eric Yuan: No, no. The problem is I know what's going to happen next because we have a lot of employees, especially young, let's say sales reps. When they see the stock price, they calculate the money they have.

Alan Murray: They're retiring.

Eric Yuan: They retire, exactly.

Alan Murray: They're moving to the Caribbean.

Eric Yuan: After COVID, most of engineers still here. We lost a lot of, I would say, the sales reps and other executives. It's not sustainable. Not to mentioning, I also made a huge mistake.

Alan Murray: You didn't like it?

Eric Yuan: I hate that too much. That's one thing. The second thing, because the traffic, because so many new users, we had to hire more employees. Literally, I made a huge mistake. We hired more than 6,000 employees within 18 months window.

Alan Murray: Just to manage.

Eric Yuan: The culture completely broken. If Michelle, at that time, for sure she did not want to join at that time. So culture is-

Alan Murray: And so then what happened? We know what happened to the stock price. It went from 550-

Eric Yuan: I know that too.

Alan Murray: … back down to where it started. Maybe you could have ended up somewhere in between.

Eric Yuan: (inaudible) you wake up and say, "My God, back to yesterday." So yeah.

Alan Murray: But what happened to the employees?

Eric Yuan: I think we spent a lot of time over the past three years really try to fix the culture problem. I can tell you prior to COVID, I think this is probably the best company I worked for. This is company I dreamed about. Build a company care about employee, every employee very happy, make a customer happy. And the culture broken, everything is so hard and it took us three years. I think we finally were-

Alan Murray: Three years to fix the damage that was caused by the pandemic.

Eric Yuan: Yeah, yeah. Finally, we are out of the woods.

Alan Murray: But wouldn't you kind of like to see that stock price go up now?

Michelle Chang: Yes.

Eric Yuan: Yeah, from now on throughout journey.

Michelle Chang: We have been, for those tracking it, while most sales companies have been down, we're up.

Alan Murray: That's true. You weren't part of the SaaSpocalypse. You had your apocalypse earlier.

Michelle Chang: We had a pandemic moment. We had a post-pandemic.

Eric Yuan: Regardless stock price up and down. AI is a new technology, a new transformation. I think being the founder and CEO, I still truly enjoy that.

Alan Murray: But I'm sure, Michelle, that that was currency that was used to retain talent as it is in many companies, the stock price.

Michelle Chang: Yep. Yeah.

Alan Murray: I mean, I guess that's a big part of that three-year adjustment.

Eric Yuan: We also have a $7.80 billion cash. So not only stock. So we can invest more. AI is good example.

Alan Murray: So cast forward, five years from now, what is the world of work going to look like and what is the role that Zoom is going to have in that world? And I want both of you to answer this question. Disagree a little bit if you want to.

Michelle Chang: All right.

Eric Yuan: I can start because I like this question a lot because I hate working for five days. And five years old very likely, even two years ago, I mentioned that four days working week will become new paradigm.

Alan Murray: Really? You think so?

Eric Yuan: I think I'm wrong. I think five years old, maybe three days. I do not know. I think probably better. I really do not think we need to work over five days because literally we all will employ so many digital agents. And I think we all have more time for human-to-human interaction like this. And probably you can spend more time talking with your customers, partners, your high school classmates and your family members. I think Zoom uses also be still very healthy.

Alan Murray: But Eric, we've been hearing those predictions for a hundred years or more, 150 years that productivity increases were going to make it possible for us to work three days a week. Nobody in this room works three days a week. Do you think-

Eric Yuan: That's a good question. Look at history. In 1924, I think Henry Ford, he revolutionized working week from six days to five days. 100 years later, still five days.

Alan Murray: Still five days.

Eric Yuan: Yeah. This is the right time.

Alan Murray: Yeah.

Eric Yuan: I'm pretty sure actually we really do not need to work for five days.

Alan Murray: And you think that'll change over the next five years?

Eric Yuan: Absolutely. Look at what we do every day, right? You spend all the time on email chat message, meetings, conversations, log into the backend of systems. I think AI agent can truly help us. You can have a 10 or maybe 100,000 digital agents working for you.

Alan Murray: Have an army of digital agents you mean?

Eric Yuan: Yeah, yeah.

Alan Murray: Michelle, how is work-life going to change?

Michelle Chang: This isn't a disagreement, but I think to build on that, I think about it less as the quantity and more of what it will feel like. And I think for me, it's an ease of things right now and I'll just use when I first came to Zoom, I'm sure everybody has had this. All of a sudden I no longer had a PC, I no longer had all the software that I know how to use and I don't know how to get anywhere. But now instead of having to know all of these apps and how you navigate it, it's going to just get served up sort of where you are in your flow of work and there's an ease that comes from that. The second thing that I sort of picture when I hear a lot of the vision that Eric is describing is, and I think you see this with a lot of tech transformation, you shift value. Like I had this dialogue with a woman at Nasdaq once where she was convinced that accountants weren't going to be as good because they didn't have the T accounts. I remember those from like … And I was like, "No, it just means they're going to shift to a higher level of work and thinking." And you know what I mean? And I think we'll look back and think that AI is something like that. Like I'm excited for my FP&A people that no longer have to spend as much time in spreadsheets or, you know what I mean? Or can learn about the business. Every FP&A person deeply wants to spend time with the business and learn more about the business. Think about-

Alan Murray: So people can move to high level.

Michelle Chang: … what a powerful tool. A shift in value of work and an ease of experience.

Alan Murray: Fascinating. So will you both come back in five years and let's see-

Michelle Chang: Yeah.

Eric Yuan: I think by the way, I forgot to mention the key is really not about our generation. We really need to think about five years old or 10 years old, what can we do differently to create more opportunities for young generation? That's a key, I think.

Alan Murray: Yeah. Yeah.

Eric Yuan: Because we can enjoy the beach time, but we want the kids still find something new, exciting to work.

Alan Murray: Yeah. Well, we will ask you back and we'll review how it's worked and where Zoom and send it-

Eric Yuan: I was sending my digital twin join at that time.

Alan Murray: Thank you so much for taking the time.

Eric Yuan: Thank you.

Alan Murray: Today's episode was produced by Kevin Burke, Michael Claudio, and Lulu Chang. It was edited by Nicole Zarilla, and my executive producer is Lulu Chang.
