Inside Intuit CEO Sasan Goodarzi's AI Bet

Intuit CEO Sasan Goodarzi brings us inside the company's multi-year shift from software to an AI-driven service model at a pivotal moment in tax season, as millions turn to TurboTax. He explains how AI is reshaping the business and driving Intuit's transformation. Goodarzi also discusses how his personal journey informs his approach to leadership, talent and hiring—while maintaining an obsessive focus on the customer amid periods of market uncertainty. Recorded on February 11, 2026.

Sasan Goodarzi: I think the big turmoil right now is what will happen to your total addressable market because of AI? What will happen to the profit pools because of AI? And therefore, are you going to be a winner or are you going to be a loser?

Alan Murray: The WSJ Leadership Institute Presents: Leaders. Hi, I'm Alan Murray. For this episode, I spoke with Intuit's CEO, Sasan Goodarzi, who is currently leading through the AI transformations of the software industry. While many are still debating the future of AI, Sasan is already deploying it, balancing a massive unified data platform with a new $100 million partnership with OpenAI. He's a leader who moved from the role of CIO to the corner office, and he has a unique perspective on how the CEO playbook has to pivot when technology is moving this fast. We've been talking about the SaaSmageddon or the SaaSpocalypse or whatever you want to call it. Is that real? Do you think that AI agents are going to start to encroach on your business that I can have an AI agent that does my taxes or keeps my books or all the things that you do?

Sasan Goodarzi: Yeah, I mean, it's a great question. Just first of all, to zoom out, we said years ago that AI was going to be bigger than-

Alan Murray: We did.

Sasan Goodarzi: ... what electricity sparked and what the internet sparked. I mean, we couldn't imagine what life would be like if we didn't have the internet today. And now we're actually seeing, I think, the start of what impact it will have to experiences, to monetization models, and to really how you do the work in a company. But before I specifically answer your question, I think the big turmoil right now is what will happen to your total addressable market because of AI? What will happen to the profit pools because of AI? And therefore, are you going to be a winner or are you going to be a loser and where will you end up? And that's what the turmoil is of the market. For us, just to set context before I answer your question, for those of you that don't know what we do, we serve consumers, small businesses, now much larger businesses. And we help them with building credit to building wealth, if you're a consumer, and we help businesses manage from lead to cash. All the things we do as an enterprise, we help businesses less than a billion dollars do that. And in that context, what we declared more than seven years ago was that we were going to become a service company. So what does that mean? A service company means that the essence of what we said is we're going to deliver experiences that are done for customers. We're going to help manage your credit, your wealth,

your taxes for you as a consumer. We're going to help do the work for you to find customers, manage your cash flow, manage inventory, get your taxes done as a business. You're always in control, but we're going to actually do the work for you. What does that mean? We're going to bring the enterprise grade insights, KPIs to you and do the work for you, and make recommendations for you. Because when you're a consumer and you're a small or even larger business, it's a lonely world.

Alan Murray: This has really been your hallmark as a leader and it's been fascinating to watch. You are focused relentlessly on the customer.

Sasan Goodarzi: That's right. And the reason I'm starting there is just, I think the society's getting so wrapped around AI. I want to make sure, at least on our end, we don't lose sight of what we're trying to do.

Alan Murray: It's not about the technology, it's about the customer.

Sasan Goodarzi: That's right. And so therefore, in context of what I just described, a company that goes from being an accounting and tax platform to a service company where we do everything for you, which is by the way, how we can expand the TAM, how we can penetrate the TAM, because our total addressable market is about 300 billion and our penetration is 6%. So therefore, there's a lot of non-consumption. And the how, we said we were going to significantly invest in our customer's proprietary data. We were going to significantly invest in domain specific AI, not generic AI. And then third is human intelligence, HI. And so that was seven years ago. Where we are today is our platform, we have created a system of intelligence where we, in essence, have AI agents and human agents that do everything for customers. Now, have we reached the destination? Not yet, but we will.

Alan Murray: And let me say, even with the SaaSpocalypse, SaaSmageddon, whatever you want to call it, you're still more than double the market cap you were when you took over.

Sasan Goodarzi: Yes, yes. We are, and we trade at a premium because of the opportunity. But just to put a fine point on answering your question, we, in essence, have become a service company that delivers confidence. And

what we are seeing, you can look at our last earnings, we're in a quiet period, so I can't talk about our earnings coming up in a couple of weeks, but we are a $20 billion company growing north of 15%. And our growth has actually accelerated, which I think in the time that we are in when you cannot disprove a negative. And there's so much negativity around what's going to happen to companies because of AI. The best way to lead through it is to actually deliver great results, great proof. But in our case, based on the combination of data, AI and HI, it's not just about AI, we have really uniquely differentiated ourselves.

Alan Murray: So this focus on service and focus on the customer, lots of people say that, but how as a leader do you actually effectuate that? How do you make it happen every day?

Sasan Goodarzi: Well, I truly believe, and it's our principles in the company that every leader has to have helicopter skills. And so, if you just look at what I've done in the last couple of weeks to make it very specific, I spend time doing chats with our frontline teams that are doing the work in the most important areas because the truth always lies in the frontline employees that are building the product, putting the commercial plans together. Two, I spend a lot of time with customers and prospects. And third, I'm deep in our KPIs and use our products. And so to answer your question, you can't sort of fly up here. You got to be clear where you're going, but you also have to have the ability to diagnose to understand what time it is and are you moving as fast as you can? And it's not just me, it's the way we operate as a company. And that's how we really have kept the company focused on what we're trying to do. Our X factor is actually our leadership team and the operating system we have in the company.

Alan Murray: One of the reasons we wanted you to be at this event is because you were a CIO yourself.

Sasan Goodarzi: Yeah. Yeah.

Alan Murray: You did the job.

Sasan Goodarzi: Yeah.

Alan Murray: And it's fairly rare. There are not a lot of CEOs who were CIOs unless they're founder engineers. Do you think that helps you?

Sasan Goodarzi: First of all, I had no business being a CIO. And that's actually really important to say because I came up from technical ranks, sales, ran businesses most of my career from when I was in my 20s and I left Intuit and came back. But before I came back, I asked for the CIO job. And Brad, our previous CEO, he was very kind and let me have a shot at it. I would've never given me the job. So I wasn't qualified to be a CIO, but it was probably by far the best job that I ever had because I learned, one, how to influence across the company because the most important and hardest leadership skill is how do you influence when you don't have "control." You never have control as a leader, but you get what I'm saying. So it was fabulous from that perspective. But then two, I understood and learned about all of the technology drivers that makes the company tick and to deliver for customers. So it was by far the best experience that I have ever had.

Alan Murray: And on that issue of control, authority without direct power, how did you do that? Where did you learn that skill? What's the secret to being able to influence the rest of the organization when you're just running the technology organization?

Sasan Goodarzi: First of all, it's hard and it's not just influence, right? It's a mix of art of carrot and a stick. But my general formula that I've learned over time based on a lot of scars on my back, not just in the CIO role, was one, just to be really clear about expectations and outcomes, like what are we trying to achieve? And two, really galvanizing the whole organization. This was why the CIO role was one of my biggest learning, which is how do I get the whole company when I'm not the CEO, but the CIO? And generally, people don't want to listen to the CIO. It's like, "Get out of my way. I'll call you if something doesn't work." But by being clear about expectations, what we're trying to achieve and then inspiring the team to get there, it's just then really mountains are built with shovels. And so really having a system in which you execute. And it was both inspiration and perspiration. It was both how do you inspire to get to a better outcome, but inspiration doesn't always work. So it was also using a stick when needed.

Alan Murray: You were sitting there, you probably saw the poll result from this group of CIOs saying that in half of their companies, it is the CEO who is the main driver of AI. And I hear this all the time now, by the way. It's become kind of a commonplace to say that the CEO must be the chief AI officer. If you're trying to drive AI throughout the organization, what kind of a CIO do you need? What's the right relationship? How does your relationship with the CIO work? What works well, what doesn't work well?

Sasan Goodarzi: I don't think it's about the CIO. I think it's about the whole leadership team. I think that's the fastest way to fail, which is you're relying on one person on your team, inclusive of yourself. You have to lead it tops-down, but it's actually about how do you get the entire management team to be clear. And you can disagree, but you have to commit and talk about how you're going to lead the company, whether it's reinventing. Because in our case, not only are we reinventing experiences based on what I articulated earlier, to deliver done-for-you experiences. No more you do the work customer, but we'll do it for you and you're always in control, but we also are reinventing our experiences internally. And the only way to do that is make sure the GMs, the head of sales and the CTO. We don't have a CIO. We have a CTO that has all of the technology, customer facing and employee facing. Critical, critical role, I want to be clear, but it's about the team, not just about that.

Alan Murray: And so what's your advice to the people sitting in this audience about how you drive change?

Sasan Goodarzi: You have to have alignment with the CEO and you have to have alignment with the leadership team. It can't just be with the CEO because the reality is if you only have alignment with the CEO and the CEO hasn't done their job to get alignment with the leadership team, because to win in the era, in our case, data, AI, and HI, human intelligence, it's not a CIO, CTO thing only.

Alan Murray: Yeah, everyone.

Sasan Goodarzi: It's the CEO getting everybody aligned. So my advice would be, make sure that you've done your job to be clear about what has to

happen and why for the company to win, to deliver for customers, to reinvent the work internally. But also you have to make sure, I know it's hard, but all of our jobs are hard. How do you get the CEO to do his or her job, which is to get the team aligned on what we're going to do so you can then be the enabler? It's not a one person show.

Alan Murray: So you took over this company well before AI exploded, before November 2022.

Sasan Goodarzi: That's right.

Alan Murray: But you looked at it and said, "AI is our future." I mean, how did you know that? What were you seeing at that moment? This is 2019, right?

Sasan Goodarzi: Yeah, I've been in the job seven years, so it was literally seven years ago. So again, it wasn't about AI, it was about the customer. And the biggest thing I learned running all parts of our company was that consumers, businesses of any size, didn't have the enterprise-grade insights and help that we do if we work at a larger company. And the biggest thing I learned was consumers wanted us to help them build credit and build wealth. Businesses wanted us to help them grow customers, manage their cash flow and make sure that they can get their taxes done compliantly and accurately. And after having been in all those roles and in the CIO role, what I realized is for us to really accelerate the company's growth. Because when I took over, we were growing like 8 to 9% and we were about 4 billion in size. We're now 20 billion in size and we're growing double the rate. And the reason was because we said the only way to accelerate growth was to create experiences that are getting things done for customers. And the only way to do that was to invest heavily in data and proprietary data, heavily invest in AI, which we don't define just by gen AI. It's machine learning, knowledge engineering, which is about accuracy, compliance and gen AI. And third, human intelligence and having our humans sit on our data and AI platform so that ultimately technology always has a ceiling and our customers want confidence. They actually want to engage with a human for advice and confidence, but it was all customer-back. And that's why we declared what we did seven years ago.

And it was actually an enormous pivotal point and a debate because not the whole team was aligned.

Alan Murray: Not everyone agreed with it.

Sasan Goodarzi: Not at all. Not at all.

Alan Murray: And now I saw you recently did a partnership with OpenAI. What's that about?

Sasan Goodarzi: I mean, we want to be where the eyeballs are, right? And the way we've built out our AI-driven expert platform, which is in essence, done-for-you experiences, we've created a system of intelligence which transverses over all of the customer's data, whether we have it on our platform or not, and transverses over all the apps, whether it's our apps or somebody else's apps. And so therefore, we have become and we will continue to be the central point of intelligence for customers. And so we will be where customers are in OpenAI, in Google Gemini. Customers can come to us. We want to be where the eyeballs are.

Alan Murray: A lot of your growth has come from acquisitions, Credit Karma, Mailchimp, some other companies that probably weren't as successful, but you've made a lot of acquisitions. How do you make the build versus buy decision?

Sasan Goodarzi: It's really a couple of things. First of all, our core business is actually really what's fueling the growth that we have. It's not acquisition driven. If you put the acquisitions to the side, our core business is actually driving the growth that we've been experiencing, which is actually really important. With that said, we look at a couple of things, data and time to market. For us, everything is about data. And so if there's an acquisition where we can, it's the customer's data, not ours, but if we can access a big tranche of data that helps us deliver done-for-you experiences, and if we feel like it will take us a lot more time to get to the place that acquisition is, then we'll look at the acquisition.

Alan Murray: That's Mailchimp, right?

Sasan Goodarzi: MailChimp and Credit Karma. That's right. Really, it's all about the data and then time to market. And time to market is everything.

Alan Murray: Fascinating. So tell me a little bit about you, how you got here. Did you always think you were going to be a CEO? Was that your ambition in life? How did you get to this point?

Sasan Goodarzi: Yes and no. Listen, I came to this country when I was nine years old from Iran before actually the revolution.

Alan Murray: Wow.

Sasan Goodarzi: I couldn't stay in any school. I got kicked out of school. I had a 1.9 GPA.

Alan Murray: 1.9, that takes work.

Sasan Goodarzi: No, it actually takes the opposite. And I say this story because I was sort of, I would say, lost for a big, long period of my life just because of the experiences coming here from Iran and the revolution in Iran and what I personally went through.

Alan Murray: You were upset to leave.

Sasan Goodarzi: No, no, I was delighted that I was in the US. But when Iran took the American hostages, this was not the best place to be, rightfully so, as a kid, because all the kids were bullying me, telling me to get the heck out of the country. But I share that story because that is really what shaped me. It's the notion of building grit and resilience that tomorrow will be a better day when nobody wants you around, when everybody tells you what you can't do. And when you have a 1.9 GPA, by the way, I'm sure you know this, but you actually cannot get into college with a 1.9 GPA. So there's a lot of things that-

Alan Murray: You didn't go to college?

Sasan Goodarzi: I did. I went to community college.

Alan Murray: Yeah.

Sasan Goodarzi: There's one person in the audience. We're together.

Alan Murray: Let's hear it for community college.

Sasan Goodarzi: But in terms of my experiences, one of the biggest things I tell my kids, and I talk about this in the company, the most underrated talent is hard work, grit, and determination. And my younger days, which by the way, I brought on to myself, none of these are excuses, has actually shaped who I am today. And frankly, times like this, when there's so much turbulence around us, I am built for these moments. I love moments like this because of my childhood.

Alan Murray: Does it affect who you hire? Do you not worry so much about people's grade point average, but look at grit and resilience?

Sasan Goodarzi: Hundred percent.

Alan Murray: Really?

Sasan Goodarzi: You have to be able to have the craft, but I look for ... I was interviewing somebody yesterday, the whole time my focus was, do you actually have the grit? Do you have the perseverance? Have you had pain and suffering in your life? Do you actually know how to go through pain and suffering? Do you know how to get on the other side of pain and suffering and create greatness? That always, that talent, I'll take any day of the week. And by the way, not too many people have it.

Alan Murray: What's the biggest mistake you've made as CEO?

Sasan Goodarzi: It's a great question. The reason I'm pausing is because I make at least a mistake or two every day. So it's you learn from your mistakes.

Alan Murray: Well, then you have lots to pick from. Just one.

Sasan Goodarzi: The couple I would say is talent mistakes are probably the biggest mistakes that I have made. And of course, without getting into names, I have learned to always go with my instinct and gut. And so the

talent mistakes I've made have been folks that had all of the skills, but didn't actually have the resilience to deal with pressure. And I've made multiple talent mistakes like that.

Alan Murray: Interesting.

Sasan Goodarzi: And it always goes back to, character is defined in times of crisis, and it's revealed in times of crisis. And the biggest mistakes I've made is leaders that could not handle the pressure.

Alan Murray: Do you figure it out pretty quickly and move to correct it?

Sasan Goodarzi: Yes. Yes, very quickly.

Alan Murray: Do you have a question you ask people you're interviewing that reveals whether they have the grit and resilience to survive this crazy time?

Sasan Goodarzi: Yeah. I ask a lot of open-ended questions and I also spend more time saying, "What questions do you have of me?" because I learn a lot. The best diagnostic is what questions the other person asks of you. And I try to assess, are they in a part of their career where they're looking for a balanced life versus they're in a part of their career where they want to win, where they are hungry, they have a chip on their shoulders, they want to prove themselves. That's the biggest thing I always try to vet out, which is hard to vet out.

Alan Murray: We were talking about this last night at dinner, at my table at least. It wasn't that long ago that every kid was being told you go to school and you learn to code because that's what the company needs. You haven't mentioned anything about technical skills here. That's not what you're looking for.

Sasan Goodarzi: Well, if you're getting hired as a CTO, you have to have technical skills, right? If you're getting hired as a commercial leader, you have to have commercial skills. If you're a segment general manager, you have to have the craft skills. That's sort of minimal table stakes. But the key to success is not whether or not you're technical enough in a CTO role. We

have an amazing CTO, and a lot of times I remind them, this is not an engineering problem.

Alan Murray: Yeah. Most of the big problems are not engineering problems.

Sasan Goodarzi: That's right. So you have to have the craft, but then it really comes down to-

Alan Murray: So then take it back up to the CEO level, and maybe you've already answered this, but what is the critical skill that CEOs need to have in the age of AI?

Sasan Goodarzi: I think it's a couple of big things. First of all, it doesn't matter what age it is. You have to be obsessively customer-back and obsessed with the customer and obsessed with how do you create markets, how do you disrupt markets, but you can't do that theoretically. You have to-

Alan Murray: And so how do you do that? I mean, you're way up here. How do you keep in touch with the customer?

Sasan Goodarzi: Well, it's what I shared earlier. I have a very intentional way in which I spend my time. I spend my time doing chats with frontline teams that are doing the work. I spend quite a bit of time with prospects and customers, particularly those that have made other choices to understand why. And then third, I'm in our KPIs and I use all products, ours, everybody else's. So I think that is the first thing that's the key to success, not just if you're a CEO at any level, but particularly since your question was around CEOs, you have to be customer-back. Two, you have to be crystal clear about where you're going, what the expectations are, but then ensure that you have a system in which you manage your own time, but also how you run the company. And it doesn't matter that it's in the era of AI or any other time. However, back to your specific question around AI and this era that we're in, I think it's particularly most important. I think the most agile teams and CEOs particularly, but most agile teams and management teams will win in this era.

Alan Murray: Will win this fight. So cast it forward. I mean, you had great foresight seven years ago when you became CEO. Tell us the next seven years, what does it look like? If it's not going to be a SaaSpocalypse, what is it going to be and how do you survive it?

Sasan Goodarzi: Well, let me talk specifically about Intuit versus pontificate generically, although I will make one comment generically.

Alan Murray: Okay.

Sasan Goodarzi: For us, it's really about finishing the job, although there's never a destination because when we get to a place where for any consumer, any business of any size other than an enterprise, we've created this system of intelligence that does everything for you. And it's not just AI driven, it's data, AI and human intelligence where we do everything for you, that is a network effect because the more customers we have, the more human experts that we have, the more they recommend. It's a network effect. And it's finishing the job that we started seven years ago. And we have been unmoved and unrattled by anything that's been going on because our focus is the customer. I would just say more generically, it's important not to get lost in the noise. There's a lot of noise in the marketplace. And by the way, that noise could be your stock is going down 50%. That doesn't feel like noise. It certainly doesn't feel like noise to me, but you can't let that have you make bad decisions. And so the biggest thing I would say is be clear about what you're trying to do, be incredibly agile, and really understand what you're going to do that helps you expand your total addressable market and actually expand your profit pool. Because that's the biggest worry is how is AI going to eat up your TAM and eat up your profit pool.

Alan Murray: Yeah, great advice. A couple of very quick questions before we go. What's the best book you've read that has helped you be CEO?

Sasan Goodarzi: I don't like books.

Alan Murray: Oh, really?

Sasan Goodarzi: They take too much time and their value's not there-

Alan Murray: Okay, a critical podcast-

Sasan Goodarzi: ... but, but, but Grit. Grit is a good book.

Alan Murray: Oh, yeah, yeah. Great book.

Sasan Goodarzi: I love a lot of the blogs from Andreessen Horowitz and a lot of different AI blogs that I read.

Alan Murray: CEO other than yourself that you most admire?

Sasan Goodarzi: I admire Andy. I admire Bill.

Alan Murray: Jassy.

Sasan Goodarzi: Andy Jassy, yes, from Amazon. I think he's got an incredible grit and he's a down to earth human being. And I admire Bill. I mean, they're two great leaders.

Alan Murray: Amazing.

Sasan Goodarzi: And I also admire Brad, our previous CEO.

Alan Murray: Yeah. Sasan, fascinating conversation. Thank you so much for taking the time.

Sasan Goodarzi: Awesome. Thank you for having me.

Alan Murray: Great to be with you.

Sasan Goodarzi: All right, thank you.

Alan Murray: Today's episode was produced by Kevin Burke, Shannon Caturano, and Lulu Chiang. It was edited by Michael Claudio. My executive producer is Lulu Chiang.
